ALI TABIKH

GIS & Remote Sensing | Open to remote and on-site internships and junior roles

Lebanon (remote or on-site) | alitabikh31@gmail.com
LinkedIn: linkedin.com/in/ali-tabikh | Portfolio: alitabikh.github.io

PROFILE

Physical Geography master's student (M2, research track) with 2+ years of self-taught, hands-on ArcGIS work, backed by Esri MOOCs. Built five self-initiated portfolio projects from raw data to maps, reports and dashboards: satellite drought monitoring in Google Earth Engine, health-access (travel-time) analysis, spatial statistics, hydrological modelling and automated map production with Python, including a 9-country 3D-relief land-cover atlas. Looking for a remote or on-site GIS internship or junior role.

SELF-INITIATED PORTFOLIO PROJECTS & GIS EXPERIENCE (2024 – PRESENT)

Land Cover in 3D Relief – 9-country atlas Oct 2026

Google Earth Engine, ArcGIS Pro Python (arcpy), NumPy, matplotlib, ESA WorldCover, Copernicus DEM

- Batch-exported 10 m land cover and 30 m elevation for 9 countries in Google Earth Engine, each in its national projection.
- Built one Python map template (relief, land cover, legend, scale, credits) that renders all 10 atlas pages in one run.

River Basins Atlas of Lebanon – automated mapping & web dashboard Oct 2026

ArcGIS Pro, arcpy (Python), ALOS DEM, Leaflet, Chart.js

- Delineated Lebanon's 16 river basins from a 30 m DEM, with Strahler stream order and morphometric parameters.
- Automated all 16 sheets and the PDF from one layout template and a Python script; published a web dashboard.

Access to Health Care – Baalbek-Hermel, Lebanon Oct 2026

Google Earth Engine, ArcGIS Pro, Python (geopandas), WorldPop, OSM; intro use of QGIS, SQL, Power BI

- Mapped 22 hospitals and 28 primary health centres from the Ministry of Public Health list, located via OSM and imagery.
- Modelled car travel time to the nearest facility (cost distance on a friction surface), calibrated against real trips.
- Found 11,100 people (2.9 %) live over 30 min from a hospital, 84 % of them in 8 cadastres; 4 maps and a dashboard.

Agricultural & Water Drought Monitoring – Upper Litani Basin, Lebanon Oct 2026

Google Earth Engine (JavaScript), ArcGIS Pro, Python, MODIS, CHIRPS

- Computed VCI, TCI and VHI (250 m, 2001–2025) and mapped drought frequency for 143 cadastres (21 boundaries redrawn).
- Getis-Ord Gi* hot spot analysis (FDR corrected): 8 drought hot spots in north Baalbek, 13 cold spots in West Bekaa.
- Qaraoun reservoir area from satellite images: −61 % in autumn 2014 vs. 2019; rainfall explains 43 % of the change.

Hydrological Mapping – Litani Sub-basin (West Bekaa) Nov 2025

- Produced a full map series of a Litani sub-basin (terrain, hydrology, land cover) in ArcGIS Pro as an independent case study.

Peer GIS Tutor (informal) – Lebanese University 2024 – 2025

- Helped classmates with the GIS course: explained tools and concepts and helped solve assignment problems.

TECHNICAL SKILLS

- **GIS:** ArcGIS Pro, ArcMap – spatial analysis, hydrology tools, hot spot analysis, geodatabases, cartography and map layouts
- **Remote sensing:** Google Earth Engine (JavaScript) – land use / land cover classification (supervised and unsupervised), satellite time series, vegetation and drought indices, water-body extraction
- **Programming:** Python (basic) – arcpy, NumPy and matplotlib for automated map production; data cleaning and charts
- **Data & tools:** Microsoft Excel, Word, PowerPoint; Git/GitHub; open data (OSM, HDX, OCHA COD, WorldPop)
- **Languages:** Arabic (native), English (very good), French (good)

CERTIFICATIONS, COURSES & EVENTS

Going Places with Spatial Analysis – Esri (MOOC) Mar 2026

The ArcGIS Imagery MOOC: Foundations and Frontiers – Esri Nov 2025

Data Analytics Using Python – Manara Jun 2025

Make an Impact with Modern Geo Apps – Esri (MOOC) May 2025

EDUCATION

Master 2 (Research) in Physical Geography – Lebanese University Expected 2027

Thesis in final writing stage (spatial and statistical analysis)

Bachelor in Physical Geography – Lebanese University 2023 – 2024
